

# Problem-free work starts with Herder maintenance machines

## Maintenance machines

## The ease of a Herder rivet press machine

Good maintenance ensures that your work tool has a longer service life, but also that you can work without problems.

Herder developed a rivet press machine to maintain mowing bucket knives and knives for top mowers. You can easily replace worn or broken knives with this rivet press, thanks to the special knife support and press and extraction tools. A plastic shield protects you from flying particles.

You can operate the rivet press with a foot pedal, leaving your hands free to position the knife properly.

### TECHNICAL SPECIFICATIONS

Voltage	220 volt
Pressure force	6 tonnes

## The simplicity of a Herder grinder

The Herder range includes an automatic grinder in 2 working widths. This PLC-controlled machine was developed to sharpen mowing bucket knives. You can choose from working widths of 300 and 500 cm. If you install a different clamping system and different software, you can also sharpen hedge clipper knives – hand-held version – with this machine. This grinder

from Herder is very easy to adjust and comes with various sensors to enable fully automatic grinding.

### TECHNICAL SPECIFICATIONS

Control	PLC
Voltage	220 volt
Working width	300 and 500 cm

You will achieve more with Herder

Maintenance machines - ENG-03
